Sanitized Copy Approved for Release 2010/06/14 : CIA-RDP89-00244R001102660021-8

Mon. 30 Sept.

Gary,

- All employees out of the pit by 1600.
- Total of 9 arc welders had to be turned off: 5 on ground floor and 4 on first floor.
- Checked shielding on ground floor slab. Didn't spot any punctures but there is gravel etc. between the slab and metal and between metal and the black insulation. I don't think it would take much weight to break through the shielding in places where there is foreign material.
- Milhausen entered site at 1455 and left at 1725.

STAT
